

Deploy & manage applications with ease.

Empower developers of all experience levels to deliver secure, scalable, and maintainable software with Salus - a comprehensive DevSecOps solution powered by AI.

Why choose Salus?

Fast & Reliable Deployments

Launch faster and stay ahead of industry demands without sacrificing security or quality.

AIOps

Coming soon

Automate repetitive tasks like log analysis, anomaly detection, and cloud optimization, boosting team productivity.

Boost Efficiency & Cut Costs

Automate developer workflows and streamline security processes, minimizing manual tasks to keep your team focused on innovation

Reduce Mean Time to Recovery (MTTR)

With continuous monitoring and quick rollback options, Salus reduces downtime and ensures business continuity.

Real-Time Security, Real Peace of Mind

Identify and address vulnerabilities early, preventing costly breaches and protecting your reputation.

Enhanced Visibility & Control

Gain real-time analytics for comprehensive insights into system performance and security posture for both Engineering and Business teams.

Compliance & Audit Readiness

Automated monitoring and logging make compliance tracking seamless, helping you meet regulatory requirements efficiently.

Let developers focus on code

We'll handle the rest

Enterprise-Grade Infrastructure

Our managed, Kubernetes-powered infrastructure is scalable and secure, supporting your Engineering and Business needs with high performance and reliability.

Intelligent Workflow Automation & Configuration

With zero-touch project configuration, Salus detects your tech stack and applies necessary configurations, enabling quick builds and deployments.

Unified Platform for Cost Efficiency

Replace multiple tools with a single, powerful platform to streamline operations, security, testing, and analytics, lowering costs across the board.

Shifting Left on Security

Automated scanning with SBOM, SAST, and DAST identifies risks in real-time (coming soon), allowing proactive security management.

Enhanced Testing & Quality Assurance

Automated unit testing and static code analysis detect issues early, ensuring consistent, high-quality code.

Real-Time Application Performance Metrics

Centralized logging and metrics capture critical application behavior to resolve issues swiftly and ensure peak performance.

Comprehensive Engineer-Driven Support

Expert guidance and zero-downtime deployments keep projects running smoothly and securely.

Intelligent Operations

Coming soon

Integrated AI continuously monitors applications for potential issues, proactively resolving them before they impact user experience.

Dedicated Infrastructure

Enterprise only

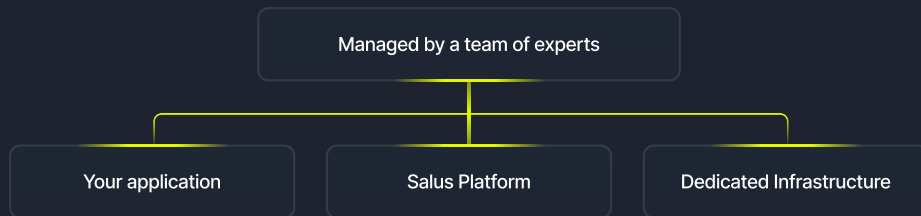

A dedicated deployment just for you. We handle the infrastructure end-to-end, eliminating management headaches and cloud costs. Scale with ease, without needing specialized talent.

Looking for the power of Salus

without the hassle of managing your infrastructure in-house?

Introducing Salus Enterprise — a dedicated deployment solution engineered specifically for your organization. We manage your infrastructure end-to-end, eliminating management headaches and cloud costs. Scale seamlessly without requiring specialized talent; our solution is designed for your exact operational needs.

Salus Enterprise offers advanced security, and complete isolation. No noisy neighbors. No sharing of infrastructure. Enjoy unparalleled peace of mind with a secure architecture designed solely for your applications.

What our customers say

“

Salus has simplified & fast-tracked our hybrid, multi cloud adoption. While we were previously using a single cloud, we are now able to scale our operations seamlessly across several private and public clouds, without having to manage all of the underlying complexities that usually involves.”

JUMIA★

Pedro Fangueiro

CISO & VP IT, Jumia Group

“

Salus has simplified the orchestration of our cloud infrastructure, allowing us to scale our business while releasing us from the operational demand it once entailed.”

apex
NETWORK

Abraham Efemena

CEO, Apex Network

“

Salus has enabled us to focus on delivering exceptional product features to our hundreds of thousands of customers, without worrying about the technical complexity.”
